10 ea	aluminum runners (2106)	1 ea	white glue bottle
12 ea	aluminum runners (2107)	1 ea	wood block
1 ea	1/4" plywood back		

Tool List

Hammer
Phillips or Slotted Screwdriver
Tape Measure

Assembly Instructions

NOTES: **Read instructions first** to be familiar with process before attempting assembly.
Assembly should be performed on a flat, solid surface.

1) **INSTALL FLOOR GLIDES**

The bottom assembly has four pre-marked holes for installing the nylon glides. If you wish to use the glides, install them now.

2) **ASSEMBLY**

Install connector screws in both side panels. Install connector cams in top and bottom panels with arrows pointing to the outsides. Lay one side panel on work surface with connector bolts facing up. Apply glue on one side of top and bottom and set into place. (Edge banded or white edges all face front.) The white surface of the center section faces up. Flush panels as needed and tighten cams with screwdriver. Apply glue as needed to other side, place side panel into place and tighten cams.

NOTE: Always tip rack from front or back to avoid stress on corner joints.
